As a Satellite Radio Subscriber, and a frequent user of the XM Traffic and weather I find it disturbing that the NAB is whinning about this and moving to eliminate it from the XM line up. I live in the Detriot area and find that the XM traffic is much more detailed and up to date then anything on the normal AM or FM band. why should the consumer have to suffer just because they (NAB) can't provide a decent product. Maybe the NAB should spend a little less time with their lawyers and a little more time with the local stations to try and figure out how they can provide a service as good as or better then XM's.
